DATE: November 7, 2005

RE: October 2005 Wood Stork Aerial Survey Observations

Dear Relicensing Stakeholder:

The October 2005 Lake Murray Wood Stork Survey was performed on Friday, October 28, 2005. Although several groups of wading birds were observed feeding along the Saluda River in the headwaters of Lake Murray, no wood storks were observed during the survey. Thanks for your continued interest in the Lake Murray wood stork surveys, and as always, please feel free to contact me should you have any questions regarding the study.
