Name not provided - 2/9/05	<p>“I would like to see SCE&amp;G reduce the lake level fluctuation. The difference between winter and summer lake level is a considerable difference. It plays havok with my dock, causes me to be frightened to boat in the winter months (stumps and sandbars), upsets the entire ecosystem of the lake and shoreline (fish, animals and plants), and reduces the overall lake enjoyment by everyone. There are many lake in the southeast that seem to be able to keep the fluctuation to within a few feet, why not Lake Murray as well?”</p>
Dezzani, M. - 2/19/05	<p>“I would like to express my opinion that 354 ft is excellent low water level for the winter draw down. Barring any unforeseen events (damn work, weed control, etc....), 354 ft should be the low water mark for the year. Thank you for taking the time to read my input.”</p>
Kletter - 3/2/05	<p>“Just to let you know that this winter's lake levels are excellent and we hope that you will continue to keep the lake's minimum level this way in the future.”</p>
Name not provided - 6/20/05	<p>“Drownings and river rescues will continue on the Saluda River until SCE&amp;G acts like a responsible neighbor and establishes planned releases from the Saluda-Hydro plant.</p> <p>It is my opinion that tourism could grow from this valuable asset, the Saluda River.</p> <p>However, the "at your own risk" use of the river now is extremely dangerous, unpredictable and eliminates the river as a focus of recreational use. Furthermore, the siren and light warnings continue to go off when there is a "change" in river levels, up or down. Therefore, they are not adhered to because they often cry wolfe. That would be the first step to provide for the safety and well-being of the public utilizing the river for recreation.</p> <p>In my opionion, SCE&amp;G could eliminate itself from future legal actions for drownings if they would</p>

	<p>simply print in the paper daily yesterday's CFS releases and today's CFS releases.</p> <p>If SCE&amp;G would act like a responsible neighbor, concerned about the well-being of the general public, it would run the generators on scheduled release dates (ie. Tuesday and Thursday afternoons) to provide planned recreation on the river that would be safer and more usefull than it is today.”</p>
Hart, S. - 7/5/05	<p>"Please raise the lake to 360 and leave it at that level. Obviously this depends on rainfall vs electric demand. I suggest you slow the flow at night when less electricity is being consumed. Slow the flow down so that the lake rises. Please do this and we will all be happy.”</p>
